# Installation Instructions for Biocatalyst Link External Module
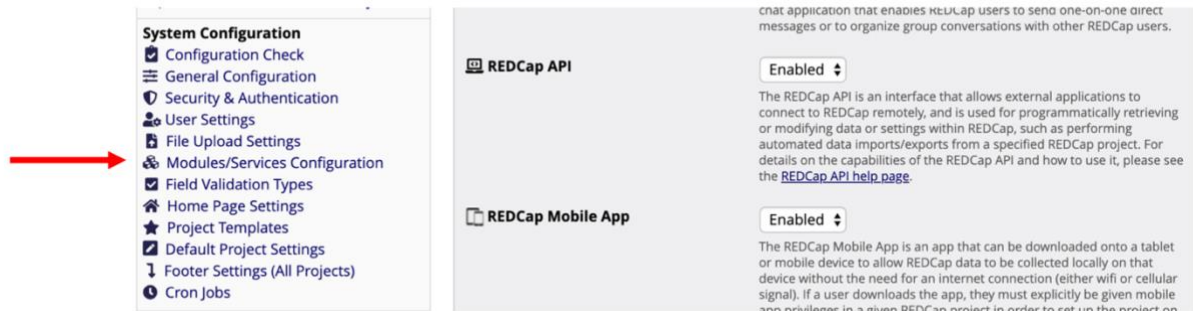

To install the REDCap Biocatalyst Link External Module, you must have Super User privileges for your REDCap system and must have access to the filesystem where REDCap is installed.

This document assumes you already have an installation of REDCap running. If you do not, please refer to the REDCap installation guide first.
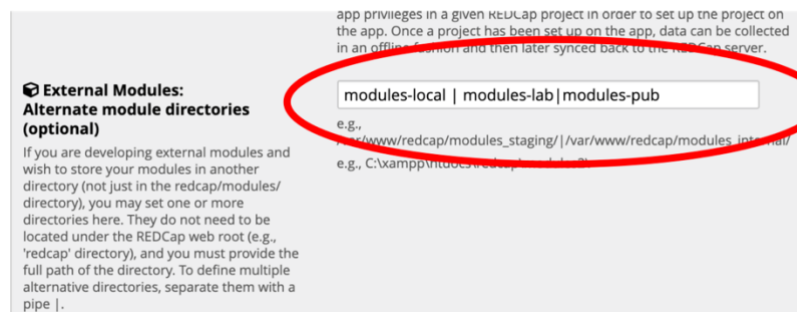

1. Login to REDCap from your favorite browser and go to the Control Panel

2. On the left-hand sidebar, find the Modules/Services Configuration link

3. Scroll down to the External Modules field and note where the location of the External Modules are installed:

4.

5. Open a terminal window and go to the directory where the External Modules are installed. Make a git pull request to the repository to retrieve the latest version of the External Module.

*git clone https://github.com/susom/biocatalyst-link.git*

6. Once the software is downloaded, go back to the REDCap instance in your browser. On the Control Panel, go to the External Module link on the left hand sidebar:

7. Select the Enable a Module button:

8. Scroll down and find the Stanford BioCatalyst Link External Module and select the Enable button:

The BioCatalyst Module is now installed in your REDCap instance.

Follow the directions in the included README.md file for module setup.
